

Run this to generate and pour packages into `apis/` :

```
$ npx openapi2aspida --build
```

Try using

Wow I thought I had tried to compile C++ abusing class templates here.

This error seems to occur because Discourse API doc (perhaps including OpenAPI schema). Discourse maintainers said so in the [doc](#) and [the thread](#).

Let the linter explain before deep diving this ourselves:

```
$ yarn global add ibm-openapi-validator
$ curl -O https://docs.discourse.org/openapi.json
$ lint-openapi openapi.json | head -n 10
```

```
[Warning] No .validaterc file found. The validator will run in default mode.
To configure the validator, create a .validaterc file.
```
