

```
$ yarn run aspida --build
```

You may be happier by having this defined in `package.json`.

Invoking the API in Application

Now you can invoke the API in type-safe manner! You can write your application like below.

```
import dotenv from "dotenv"
import axios from "axios"
import aspida from "@aspida/axios"
import api from "../apis/$api"
import type { CategoryList } from "../apis/categories"

dotenv.config()

const axiosConfig = {
  timeout: 3000,
  baseURL: 'https://discourse.joinmastodon.org',
  headers: {
    'Accept': 'application/json',
    // 'Api-Username': process.env.DISCOURSE_API_USERNAME,
    // 'Api-Key': process.env.DISCOURSE_API_KEY,
  }
}

let client = api(aspida(axios, axiosConfig))

;(async () => {
```
